Who's afraid of the big bad human?

講師 : Katharina Kasper (オンライン出演)

所 属 : 宮下研究室 / Mammal Research Institute, Polish Academy of Sciences

Human-dominated landscapes are rapidly evolving ecosystems in which wildlife communities are increasingly shaped by human activity and land modification. Across much of Europe, humans have functioned as the sole top predator for centuries, but the recent natural recolonization of gray wolves has reintroduced a complex trophic layer interacting with and beneath people. While much of our understanding of wolf behavior still relies on studies from remote protected areas in North America where human interaction is low, such research is barely transferable to the European context. For her PhD at the Mammal Research Institute of the Polish Academy of Sciences (Bialowieza, Poland) and the Leibniz Institute for Zoo and Wildlife Research (Berlin, Germany), Kathi Kasper explored how wolves occupy novel ecological niches and develop strategies to live amid people, examined how the shift from historical heavy persecution to species protection has shaped wolf fear and habituation, and advanced our understanding of what drives so-called 'problematic' wolf behavior.

世話人

諸澤崇裕 (魚類・野生動物生態学研究室) tmorosawa@go.tuat.ac.jp

高田隼人 (野生動物行動生態学研究室) takadah@go.tuat.ac.jp

小林勇太 (森林資源管理学研究室) kobayashiyuta@go.tuat.ac.jp

平原 俊 (森林経営学研究室) hirahara@go.tuat.ac.jp

渡辺将央 (生産環境システム学研究室) masahisa-watanabe@go.tuat.ac.jp
