

2014 International Conference on Modeling Identification and Control

Tokyo, Japan,

Special Session on: “The application of the theories and methods of nonlinear analysis in the control of science and technology”

The theory and methods of nonlinear analysis is an important research area in modern mathematics. It has gradually gained a great deal of attention of mathematicians and many engineering and technical experts. This special session focus on the application of the theories and methods of nonlinear analysis in the control of science and technology, and, this theories and methods of modeling complex systems.

Session Organiser by Professor Wanli YANG

Institute of Nonlinear Science, No.1, Zhujiafen-wuli, Fengtai District, Beijing, China.
